

JACOB ANDREW KELLEY

Salt Lake City, UT | jake.kelley@pm.me | 678-628-8538 | linkedin.com/in/jakekelley1 | jake-kelley.github.io

Security Architect and privacy advocate. Technical leader and hands-on builder working in DoD security engineering since 2015, currently architecting a large secure cloud environment and the 1,000+ workloads within it. Spans hybrid and multi-cloud security architecture, detection and SIEM engineering via Infrastructure-as-Code, and NIST 800-53 / RMF compliance depth - while leading and mentoring the engineers doing it.

SKILLS

Leadership: Team Management, Project Scheduling, Professional Development, Product Delivery, Proposals & Business Development, Interviewing

Security Architecture & Operations: Security Control Selection & Implementation, Vulnerability Assessments & Risk Scoring, Continuous Monitoring (ConMon), Network Design, Threat Modeling (Architectural & Data Flow), Active Directory & Group Policy, Nessus, Splunk SIEM, Incident Alerting & Response

Identity and Access Management (IAM): AWS IAM, Azure AD, Multi-Factor Authentication (MFA), identity-centric access control architecture, Zero Trust Architecture (ZTA) principles applied to network design

Security Monitoring & Data Analytics: Security Information and Event Management (SIEM), Detection Rule Authoring & Tuning, Network Traffic Monitoring, Endpoint Detection and Response (EDR — Microsoft Defender for Endpoint), Cloud Tools (AWS GuardDuty, CloudTrail, Microsoft Defender, Flow Logs)

Application & Supply Chain Security: Secret Scanning, Software Bill of Materials (SBOM) Generation, Container Package Scanning, Code Analysis & Security Impact Reviews, CI/CD Pipeline Security (merge-gated scan enforcement)

Security & Data Frameworks: NIST 800-53, Risk Management Framework (RMF), CIS Controls, STRIDE, MITRE ATT&CK, Splunk Common Information Model (CIM), Open Cybersecurity Schema Framework (OCSF) familiarity

Languages: PowerShell, Bash, Batch, Python, Go, Splunk Search Processing Language (SPL), SQL, Ansible, Terraform, HTML, CSS, Markdown

Cloud and Virtualization: AWS, Azure, Kubernetes (working knowledge), Hyper-V, ProxMox (KVM), VMware, Docker

EXPERIENCE

Security Architect

Accenture Federal Services - Salt Lake City, UT

July 2026 - Present

- Serve as Security Architect for a large DoD secure cloud environment spanning 100+ cloud accounts and subscriptions, providing security engineering and architecture to both the environment itself and the 1,000+ workloads within it
- Design and secure hybrid and multi-cloud network architectures spanning the environment's cloud and on-premises workloads
- Retain ownership of prior Cloud Security Engineering Manager scope in addition to expanded architecture responsibilities

Cloud Security Engineering Manager

Accenture Federal Services - Salt Lake City, UT

March 2022 - July 2026

- Served as Cloud Security Engineering Manager, leading a team of 12+ security engineers on cloud security initiatives via agile program management framework; hired 8 of them
- Advised Architecture Review Board as Security SME on security practices and application design, across a minimum of two formal architecture reviews per month
- Architected and implemented security infrastructure including IAM and RBAC structure, hub-and-spoke network design, secret scanning and management, and integrated security tools to improve logging, detection, and response capabilities
- Authored and tuned hundreds of Splunk queries across 40+ log sources feeding the SIEM
- Guided architecture review of cloud deployments against Zero Trust principles, implementing identity-centric access controls across AWS/Azure environments
- Developed Infrastructure-as-Code (Terraform/Ansible) to deploy and operate SIEM platforms and log-ingestion pipelines, cloud capabilities, or hardening configurations, delivering a dozen or more fully configured Splunk SIEM deployments through a process that was previously manual
- Led deployments of secure virtual infrastructures and security tools on various cloud and virtualization platforms for new and existing customers
- Managed communications, expectations, and project scheduling between government sponsors, internal leadership, and engineering teams
- Developed and refined security tools and procedures based on business needs

Security Engineer & Systems Administrator

L3Harris Technologies - Salt Lake City, UT

November 2020 - March 2022

- Served as Security Engineer and Systems Administrator managing security operations across 20+ secure DoD networks and 100+ systems. Designated Linux SME.
- Continued responsibility for DoD network infrastructure security architecture, design, and compliance operations following Risk Management Framework (RMF) and NIST 800-53 standards, including security audits, continuous monitoring, and vulnerability assessment and remediation

Security Engineer & Systems Administrator

Georgia Tech Research Institute - Atlanta, GA

January 2015 - October 2020

- Served as Security Engineer and Systems Administrator for multiple secure Department of Defense (DoD) networks containing Active Directory domains of both Windows and Red Hat Enterprise Linux systems
- Architected and deployed 10+ secure DoD networks totaling 80+ systems, including servers, workstations, and switches, following the Risk Management Framework (RMF) and NIST 800-53 for selection and implementation of security controls
- Utilized continuous monitoring (ConMon) tools to maintain security posture and compliance of systems
- Conducted risk and vulnerability assessments, making remediations as necessary
- Managed small team of six peers, providing technical guidance and delegation of tasking
- Developed innovative and efficient processes for automated deployments of physical and virtual IT systems

SELECTED PROJECTS

BrainFrame
brain-frame.ai

- Founder and builder of BrainFrame, a private, local-first AI system built around a dedicated edge device: chat, files, automations, alerts, and research running on the owner’s own network rather than in a vendor data center
- Run small language model inference on NVIDIA Jetson edge hardware, with data sovereignty, privacy, and security as the governing design constraints
- Built the surrounding platform: an admin portal for fleet, model, user, and performance management, connected-service tool integrations, and mobile, desktop, web, and watch clients

Ironlog
github.com/jake-kelley/ironlog

- License-free self-hosted Security Information and Event Management (SIEM) platform built for efficient large-scale log ingestion, shipping with prebuilt NIST 800-53 compliance dashboards
- Full open-source stack: Vector agents and aggregators with VRL normalization pipelines, ClickHouse columnar storage, HyperDX log search, Grafana dashboards and alerting, and Keycloak/oauth2-proxy SSO

Open-Source Tools and Homelab
jake-kelley.github.io

- Design, direct, and maintain open-source developer and security tooling, including Decurion (a Go binary that turns Claude Code into a coordinated multi-agent team), Portanote (a portable single-binary Markdown notes app), and Scry (instant fuzzy filename search for macOS)
- Operate an expansive homelab of virtualized and containerized services across ProxMox (KVM), Hyper-V, VMware, and Docker as the working environment for the above

EDUCATION

Western Governors University	October 2019 - July 2021
Master of Business Administration	Information Technology Management Concentration
Kennesaw State University	August 2013 - December 2017
B.S. in Information Technology	Information Assurance and Security Concentration

CERTIFICATIONS AND CLEARANCE

Active DoD Top Secret Clearance - held continuously since 2019
ISC2 Certified Information Systems Security Professional (CISSP)
CompTIA Security+
Red Hat Certified System Administrator (RHCSA)
Splunk Power User
