jake.kelley@pm.me | 678-628-8538 | [linkedin.com/in/jakekelley1](https://www.linkedin.com/in/jakekelley1) | jake-kelley.github.io

Security Architect and privacy advocate. Technical leader and hands-on builder working in DoD security engineering since 2015, currently architecting a large secure cloud environment and the 1,000+ workloads within it. Spans cloud security architecture (IAM/RBAC, Zero Trust, hybrid and multi-cloud network design), detection and SIEM engineering via Infrastructure-as-Code, and NIST 800-53 / RMF compliance depth — while leading and mentoring the engineers doing it. ISC2 CISSP, MBA, active DoD Top Secret clearance.

SKILLS

Certifications and Clearances: ISC2 CISSP, CompTIA Security+, RedHat CSA, Splunk PU, DoD Top Secret Clearance

Leadership: Team Management, Project Scheduling, Professional Development, Product Delivery, Proposals & Business Development, Interviewing

Security Architecture & Operations: Security Control Selection & Implementation, Vulnerability Assessments & Risk Scoring, Continuous Monitoring, Network Design, Threat Modeling (Architectural & Data Flow), Active Directory & Group Policy, Nessus, Splunk SIEM, Incident Alerting & Response

Identity & Access Management: AWS IAM, Azure AD, Multi-Factor Authentication (MFA), Zero Trust (ZTA) network design, identity-centric access control architecture

Security Monitoring & Data Analytics: SIEM, Detection Rule Authoring & Tuning, Network Traffic Monitoring, EDR (Microsoft Defender for Endpoint), Cloud Tools (AWS GuardDuty, CloudTrail, Microsoft Defender, Flow Logs)

Application & Supply Chain Security: Secret Scanning, SBOM Generation, Container Package Scanning, Code Analysis & Security Impact Reviews, CI/CD Pipeline Security (merge-gated scan enforcement)

Security & Data Frameworks: NIST 800-53, Risk Management Framework (RMF), CIS Controls, STRIDE, MITRE ATT&CK, Splunk CIM, OCSF familiarity

Languages: PowerShell, Bash, Batch, Python, SPL, SQL, Ansible, Terraform, HTML, CSS, Markdown

Cloud and Virtualization: AWS, Azure, Kubernetes (working knowledge), Hyper-V, ProxMox (KVM), VMware, Docker

EXPERIENCE

Security Architect

Accenture Federal Services - Salt Lake City, UT

July 2026 - Present

- Serve as Security Architect for a large DoD secure cloud environment, providing security engineering and architecture to both the environment itself and 1,000+ workloads within it
- Design and secure hybrid and multi-cloud network architectures spanning the environment's cloud and on-premises workloads
- Retain ownership of prior Cloud Security Engineering Manager scope in addition to expanded architecture responsibilities

Cloud Security Engineering Manager

Accenture Federal Services - Salt Lake City, UT

March 2022 - July 2026

- Served as Cloud Security Engineering Manager, leading a team of security engineers on cloud security initiatives via agile program management framework
- Advised Architecture Review Board as Security SME on security practices and application design
- Architected and implemented security infrastructure including IAM and RBAC structure, hub-and-spoke network design, secret scanning and management, and integrated security tools to improve logging, detection, and response capabilities
- Guided review of Zero Trust network architectures for cloud deployments, implementing identity-centric access controls across AWS/Azure environments
- Developed Infrastructure-as-Code (Terraform/Ansible) to deploy and operate SIEM platforms and log-ingestion pipelines, cloud capabilities, or hardening configurations
- Led deployments of secure virtual infrastructures and security tools on various cloud and virtualization platforms for new and existing customers
- Managed communications, expectations, and project scheduling between government sponsors, internal leadership, and engineering teams
- Developed and refined security tools and procedures based on business needs

Security Officer & Systems Administrator

L3Harris Technologies - Salt Lake City, UT

November 2020 - March 2022

- Served as Security Officer and Systems Administrator managing security operations across secure DoD networks. Designated Linux SME.
- Continued responsibility for DoD network infrastructure security architecture, design, and compliance operations following Risk Management Framework (RMF) and NIST 800-53 standards, including security audits, continuous monitoring, and vulnerability assessment and remediation

Security Engineer & Systems Administrator

Georgia Tech Research Institute - Atlanta, GA

January 2015 - October 2020

- Served as Security Engineer and Systems Administrator for multiple secure Department of Defense (DoD) networks containing Active Directory domains of both Windows and Red Hat Enterprise Linux systems
- Architected and deployed secure DoD networks containing servers, workstations, and switches following the Risk Management Framework (RMF) and NIST 800-53 for selection and implementation of security controls
- Utilized continuous monitoring (ConMon) tools to maintain security posture and compliance of systems
- Conducted risk and vulnerability assessments, making remediations as necessary
- Managed small team of six peers, providing technical guidance and delegation of tasking
- Developed innovative and efficient processes for automated deployments of physical and virtual IT systems

EDUCATION

Western Governors University

Master of Business Administration

October 2019 - July 2021

Information Technology Management Concentration

Kennesaw State University

B.S. in Information Technology

August 2013 - December 2017

Information Assurance and Security Concentration
